Also expressed in pancreas, esophagus, stomach, decdenum, colon, trachea, lung, salivary glands and fallopian tube. PSP94 is expressed in lung and breast, whereas PSP57 is found in kidney and bladder.

ν.
INSUE SPECIFICITY: In testis, primarily in haploid spermatids.

-! TISSUE SPECIFICITY: In testis, primarily in haploid spermatids.
-! DOMAIN: The MAM domains probably mediate sperm adhesion to the zona pellucida.
-! DOWAIN: During sperm migration through the reproductive tracts, the mucin-like domain might inhibit inappropriate trapping of spermatozoa or promoting adhesion to the oviductal isthmus.
-! DOWAIN: The VWFD domain 2 may mediate covalent oligomerization (by similarity to human intestinal mucin MUC2).
-! SIMILARITY: Contains 3 WAM domains.
-! SIMILARITY: Contains 1 EGF-like domain.
-! CAUTION: Ref.2 sequence differs from that shown due to transposition of a number of exons.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Cheung T.L., I
